CEPREDE

Dashboard IIRE Benchmark > Description

<< Dashboard

Description:

With this dashboard you will be able to examine the differences in Innovation that occur between Spain and the rest of Europa in a regional level.

Innovation Indicator of European Regions (IIER) includes a total of 32 European regions: the 15 top European regions plus the 17 Spanish Autonomous Communities. With Eurostat as main data source, the IIER is configured using 18 Key Performance Indicators (KPIs) grouped into two perspectives and five objectives: Households and Users (Information Society), Employment in Technology, Intellectual Property, Education & Long-life Learning and Research & Development. This classification is in the same line as the iDigital Agenda.

In this case we confront the top 5 Spanish regions (Madrid, Cataluña, Aragón, País Vasco and Navarra) against our figures for European regions benchmarking. These target figures are the average of the 17 leading European regions.

It offers data from 2008 to 2021. Since Eurostat only provides yearly data, monthly data has been estimated to produce comparative charts.

As with most of our products, we have available on request this same format for any given Spanish region.

CEPREDE also elaborates a similar dashboard based in Excel; feel free to contact us for further details.

Enjoy it!
