## Dashboard NE.EU Benchmark >Description

<< Dashboard

### Description:

Built around the same 14 KPIs (Key Performance Indicators), this indicator provides a better understanding of the evolution of the diffusion and use of IT in business activities (of the iDigital concept).

These KPIs are grouped in four pillars: Public sector, Companies, Households and Innovation context.

This dashboard compares european countries versus EU-15 (considered as Target or reference) regarding the diffusion and use of IT. With this dashboard you will be able to examine how this gap has been changing as well as what to expect from it through our prediction. With Eurostat as main data source. It offers data from 2005 to 2019, being 2020 our forecast.

We have available on request this same format for any given UE-15 countries. Especially SPAIN in our specific Apps.

This indicator is updated each year during June. Since Eurostat only offers yearly data for these KPIs, monthly data has been estimated in order to produce comparative charts.

CEPREDE also elaborates a version of this dashboard in Excel; feel free to contact as for further details.

Enjoy it!
